

WHAT IS CHECKPOINT?

Checkpoint is a secure and easy to use check-in program, run through our church database. The system:

- Provides the assurance that *all* children can be identified and located, especially in the case of an emergency.
- Offers confidence in matching guardians with children upon pickup.
- Makes known allergies of each child.
- Offers an accurate record of attendance in classes, activities, or events.
- Instantly provides name badges to children and visitor badges to guests.

This software system significantly enhances the security and safety of our beloved children.
